

About gloStream

Just the facts

gloStream EMR and practice management solutions are delivered and supported through a nationwide network of partners. gloStream solutions are secure, easy-to-use applications built on the Microsoft platform. With voice recognition technology, a simple user interface and single-click access to comprehensive patient data, gloStream products help doctors improve patient care while creating workflow efficiencies within the practice.

Product profile

gloEMR™ and gloEMR modules:
 gloVOICE™
 gloDOCUMENTS™
 gloFILMS™
 gloRX™
 gloSYNC™
 gloLINK™

Range of specialties

Orthopedics and Sports Medicine, Cardiology, Family Practice, Obstetrics/Gynecology, Neurology, Urology, ENT, Gastroenterology, Dermatology, Hematology, Rheumatology, Plastic Surgery, Pediatrics, Internal Medicine, General Surgery and more.

gloStream provides practice management and electronic medical records solutions to a wide range of physician practices and specialties. As a 100-percent partner-driven company, our solutions are exclusively sold, integrated and supported by a nationwide network of partners. This strategy allows physicians and integrators to work together to tailor the best total solution to meet the unique requirements of any practice. Service and support is delivered locally so workflow at a practice is optimized and never interrupted.

gloStream's mission and vision is to develop easy-to-use healthcare information technology solutions to improve the quality of patient care and the efficiency of facilities in which care is delivered.

The company remains privately owned to maintain its focus. We thrive on straightforward communication, fast decision-making and efficiency. Because of our organizational structure, we can quickly adapt to changing market conditions by deploying funds and manpower when and where they are needed most. In this way, gloStream swiftly and seamlessly adapts to meet fast-evolving industry needs.

Open and flexible

We further our mission by exclusively creating and supporting the very best healthcare information technology solutions on the market. gloStream EMR and practice management solutions are easy-to-use applications built on an open and standard framework for easily integrating third party applications and devices. Through gloStream OPHIT™, the Open Platform for Healthcare Information Technology, gloStream forms alliances with best-of-breed industry solutions. OPHIT allows either HL7 integration or direct integration with the open gloEMR platform to provide a single dashboard interface to practice management, e-prescribing, medical monitoring devices, imaging and PACS systems. OPHIT helps improve gloStream products with new features and functionality and the latest technology to enhance patient care.

gloStream believes in the long-term vision of making patient healthcare information highly accessible and available. That is why we are committed to participating in the development of standards for portability and interoperability by our active involvement in CCHIT, HIPAA, EHRVA, HL7 and other industry standards-setting groups.

Background

gloStream got its start when two software developers with a gift for translating ideas into easy-to-use technology met. They later began developing an EMR application that would become gloEMR, the company's flagship electronic medical record (EMR) product.

In 2006, technology veteran Mike Sappington joined gloStream as CEO, charged with developing and implementing the company's business strategies and overseeing day-to-day operations. Many doctors in different specialty practices work closely with gloStream's software research and development team to ensure the company's products meet patient, clinical and administrative practice needs.

gloEMR: the latest generation of EMR technology

gloStream has responded to physician and practice needs by using the latest technology to create one of the most powerful and easy-to-use EMR solutions on the market today.

gloEMR couples advanced voice recognition with dynamic templates built on the Microsoft platform to allow physicians to shape electronic documents to the way they practice. This highly customizable application provides single-click access to a full range of patient data and clinical decision tools and converts dictation, in real time, into precise and accurate exam notes. During a patient encounter, for example, providers can dynamically pull data relating to the patient from a clinical database. With a single click, the patient's complete history is displayed showing medications, labs, orders and other vital information. In addition, doctors can easily configure and adjust templates and information within exam notes so that each record correlates specifically to a patient's particular examination.

gloEMR has proven to be a valuable and popular technology for medical practices. A principal reason for its adoption is the software's ease of use. In developing gloEMR, the programming team gathers all the nuances of the way a doctor's office operates, and applies their creativity and technical proficiency to create an application that is easy for physicians to use and expand as the number of patients and physicians in their practice grows.

The gloEMR solution is built on an open platform that enables partners to integrate and interoperate their solutions seamlessly with the gloStream application. Through best-of-breed third-party solutions, gloStream works to improve gloEMR with new features and functionality to meet the evolving requirements of doctors seeking to deliver enhanced patient care efficiently.

Forward-thinking

Physicians can also help shape gloStream products by participating in the gloStream Center of Excellence program, which encourages them to influence the direction of EMR development. Through this program, physician groups collaborate with gloStream developers to design product enhancements that will produce the maximum benefits for the profession's EMR requirements.

gloStream is helping physicians adopt EMRs for their individual and group practices to gain the benefits of improved patient care, security, speed, accuracy and efficiency.
